

## dexDRONES – Factsheet

**dexDRONES** is Dex’s Digital Sample Library’s newest initiative, aimed at providing usable, striking aerial footage of beautiful landscapes for commercial use by artists, students, institutions, and businesses. Because aerial cinematography is difficult to film correctly and with proper permitting, Dex’s dexDRONES initiative aims to remove these barriers of access in the interest of creating better media across the internet, for free, forever.

### Who it’s for

Creators, students, and partners who want to publish reusable media—video/audio—under CC-BY 4.0 (free, forever, with attribution).

- Area coverage in commercial films
- City and local governments who want to display their landscape in assets
- Students learning to use film with high dynamic range (learning to grade, edit, etc.)

### NEW PROGRAM – dexDRONES
